## Weekly Coal Production

Production for Week Ended: July 18, 1987

## Highlights

U.S. coal production in the week ended July 18, 1987, as estimated by the Energy Information Administration, totaled 16.6 million short tons (bituminous coal and lignite, 16.5 million short tons; Pennsylvania anthracite, .06 million short tons). This was 27.9 percent higher than in the previous week, and was 5.9 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through July 18, 1987, was estimated at 480.2 million short tons, 1.8 percent below the 489.1 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
